

## Land Vehicle Support

**How can we help?**

# WHO WE ARE

**For more than 60 years, Monroe has supplied companies with quality manufacturing, hardware, expertise, and unparalleled customer service.**

Our team lives by one simple question: How can we help? We are problem solvers that are focused on working with our customers to provide nothing short of a solution. Where most manufacturers are focused on making the sale, we choose to focus on building relationships and lending our expertise to continually make our customers more successful.

Over the years, Monroe has gone from a small fixture and workholding company, to being considered one of the largest suppliers of industrial components in North America. With our vast network of partners and our proven expertise, we have become a trusted “go to” for American made defense systems and the suppliers that build them.

Monroe offers the unique ability to help companies that need value propositions for both new and legacy systems. One of the things that sets us apart from the rest is that we are not tied to a fixed suite of offerings and equipment. With our full spectrum of fabrication capabilities and industrial product lines, we have positioned ourselves to offer the best possible solutions to our customer base.

With facilities in multiple locations, and direct sales engineers nationwide, we truly are a boots on the ground company.

**We are Monroe, how can we help?**
